Product Description

The S220 mechanical personal scale is the ideal scale for use in the pharmacy, in the gym or for home use. It is characterised by its uncomplicated handling, a robust housing and the circular pointer display in retro design, making it an eye-catcher in every bathroom.

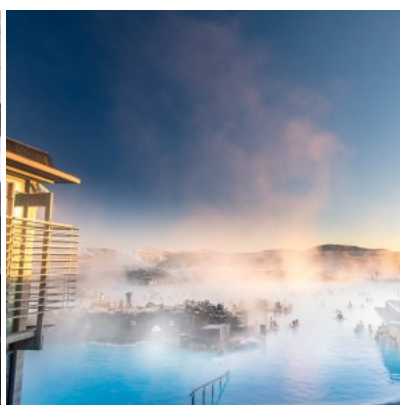

- Large and clear circular pointer display
- Maximum load 150 kg, division 1 kg
- Manual zero setting possible
- Robust steel housing
- Weighing platform with non-slip and easy-care plastic coating

Wide range of applications...

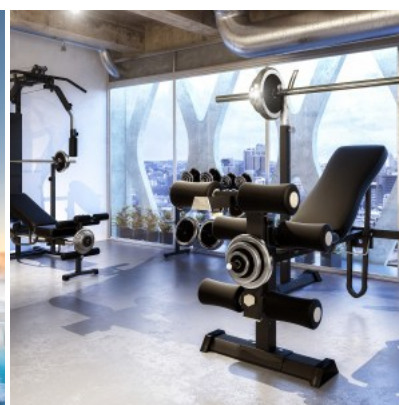

At home

With its timeless chic retro design, the mechanical scale S220 is a special eye-catcher in any bathroom. The dark blue dial in particular stands out from other mechanical bathroom scales. The scale determines the weight purely mechanically and therefore does not need any electricity at all. This means that worries about empty batteries or high follow-up costs are a thing of the past and the scale is always ready for use.

In pools & spas

The mechanical scale S220 is also particularly suitable for use in swimming pools and spas due to its non-slip weighing platform and the rubber feet on the underside of the scale. This ensures a safe stand when stepping on the scale, even with wet feet. The easy-to-clean surface as well as the robust metal housing allow for easy cleaning, so that hygiene standards can also be met without any problems at any time.

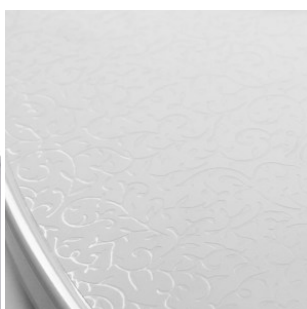

At the gym

With the mechanical scale S220 you can check your body weight regularly and promote your health and fitness in a targeted way with sport and a healthy diet. Thanks to the sturdy metal housing and the robust weighing mechanism, the mechanical scale S220 is particularly durable and is therefore ideal for use in fitness studios. In addition, it convinces with its easy handling.

The special feature of our personal scale S220...

Large and clear circular pointer display

Non-slip tread surface

No batteries needed

Manual zero setting possible

The large white numbers on a dark blue background and the clearly visible red pointer make it very easy to read the displayed weight value of the mechanical personal scale S220.

The large weighing platform with its non-slip, rubberised surface always gives you a secure footing, even with wet feet. The underside of the scale is also equipped with four rubber feet. This always ensures a secure hold on a wide variety of surfaces.

The personal scale S220 determines the body weight without electricity or batteries - purely mechanically. This means that the scale is always ready for use and you no longer have to worry about empty batteries. In addition, the scale is much more environmentally friendly compared to conventional digital scales.

If necessary, you can manually adjust the pointer back to zero using a small wheel before weighing. Manual zeroing corrects small deviations from the zero point and thus guarantees accurate and reliable measurement results in the long term. The adjusting wheel is located centrally below the front edge of the weighing platform.
